

I would like to offer praise to FCC for so far allowing us to access to vital local Instant Weather & Traffic channel on XM Satellite Radio. One of the most rewarding service XM Satellite radio offers is local Weather & Traffic channel. It is continuous, brief, without any interruption and very frequent. This allows listeners to access to a highly vital information very quickly and adjust their daily schedule accordingly. Especially, listeners with families or listeners deciding whether to travel on local beltways and highways with very fast changing traffic conditions or unstable weather conditions that change very quickly. Thus, it would be very appropriate to reject NAB's petition 04-160.
